

SwyxExpress – The complete solution for your business communication

SwyxExpress is the hardware bundle for small and medium-sized enterprises with preinstalled and licensed Microsoft Windows Server, preinstalled SwyxWare and preinstalled ISDN card. Hardware and software come directly from the software manufacturer, ensuring that these components are optimally matched. SwyxExpress is available in three variants: X20 is designed for use in smaller networks with up to twenty users. SwyxExpress X75 and X150 can manage up to seventy-five and one hundred and fifty users respectively, and – depending on the configuration with ISDN cards – are also suitable for expanding existing installations quickly and easily to provide a failsafe standby system.

SwyxExpress X75/
X150 – perfect
integration in your
server rack

Advantages of SwyxExpress

- Hardware is optimally matched to the system requirements, and tested by Swyx
- No installation effort, thanks to preinstalled software
- SwyxExpress already includes the operating system license, which only has to be activated with Microsoft after installation.
- Microsoft Windows Server Telco Edition does not need any additional licenses, such as e.g. Client Access Licenses
- SwyxExpress can be expanded with other Swyx add-on products within the scope of the hardware specifications
